Wire strippers

A distinction is made between the following processing tools.

Manually adjustable cable strippers

Are set manually to the stripping diameter by feel. Because of this there is a high danger of damaging the wire (HAUPA Article no. 210644+210643).

Automatic or self-adjusting cable strippers

For quick and easy cutting and stripping. These tools adjust themselves automatically to the required cable diameter or insulation thickness. It is not possible to damage the wire or the insulation. A length stopper makes repetitive stripping a simple matter. (HAUPA Article no. 211930+210683+ 210690).

Micro precision cable strippers

These are used where fine wires have to be stripped: Data technology, network technology, control technology, telecommunication, electronics, model construction. (HAUPA Article no. 200033+200069+200039+200068) page 15

Automatic wire stripper

Ergonomically designed, automatic wire stripper with a specially developed sensing system making adjustment to the individual cable cross-section unnecessary. The sensing system means that it is absolutely impossible to damage wires, conductors or outer insulation.

The stripper is suitable for single- and multi-wire cables and fine-wire cables from 0.2 to 6 mm². The slender form of the stripper head is ideal for use in areas which are difficult to access. One of the most striking characteristics of these stripper is the fact that very little force is needed to operate them. The stripper blades adapt automatically to different cable cross-sections and therefore ensure that individual strands and wires are not damaged.

A further feature is the integrated diagonal cutters with the wire up to max. 2.5 mm² (Cu and Al conductors.) The variable length stop from 6 to 18 mm makes work easier in longer processing runs.

The coloured soft plastic zone in the handle offers non-slip grip and makes the work fatigue-free.
