

CBS-1, CBS-2 and CBS-3 Circuit Breaker Stab Sets

- Connect to virtually all Megger circuit breaker test sets
- Provide quick connection to breaker under test
- Can accommodate over 70 types of breakers

DESCRIPTION

Model CBS-1 and Model CBS-2 Circuit Breaker Stab Sets allow connection to virtually all MEGGER circuit breaker test sets. Their use eliminates the significant losses that occur if leads are used to connect the breaker under test to a test set.

These stab sets allow testing of drawout style metal-clad breakers. (Cables must be used when testing molded-case circuit breakers or other devices that will not connect directly to the stab.)

Breakers that require a set of stabs designed specifically for that breaker can be accommodated by Model CBS-3 stab sets. The most common breakers requiring Model CBS-3 stabs are listed in Ordering Information.

To order stabs required for other drawout style breakers, designate the specific breaker(s) to be tested, including manufacturer, model or type, frame size and coil rating. (Each breaker may require a different stab set.)

Model CBS-1 stab sets will accommodate the following breakers:

AK-15	KB	LA-600
AK-25	K-225	LA-1600
AKR-30	K-600	G-25A
DB-15	K-1600	FP-15
DB-25	LA-25	FP-25
KA	LA-50	

Model CBS-2 stab sets will accommodate the following breakers:

AK-50	DB-75	KC
DB-50	DB-100	FP-50

The most common breakers requiring Model CBS-3 stabs are listed in Ordering Information; others can be accommodated if requested.
